

SailPoint IdentityIQ Integration configuration

Adding in the SailPoint configuration allows you to create a connector between Osirium and SailPoint. Once a connection has been made:

- SailPoint can create Osirium users but they will be disabled as default.
- Osirium will inform SailPoint of any new users created.

Note

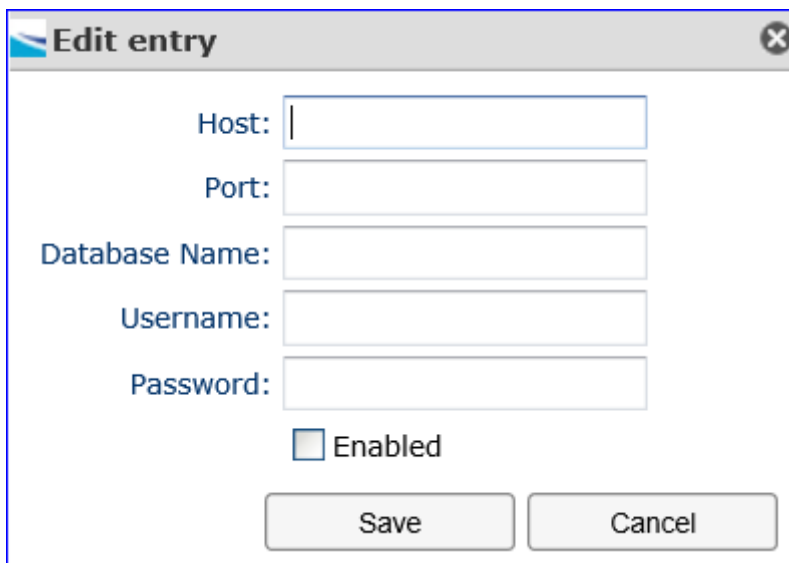

The SailPoint IdentityIQ virtual machine and database need to be configured prior to adding the SailPoint IdentityIQ Integration configuration to Osirium.

To create the connection:

1. Click the  icon.

2. Within the *Edit value* window, enter the SailPoint virtual machine details as follows:

A dialog box titled 'Edit entry' with a close button in the top right corner. It contains several input fields: 'Host:', 'Port:', 'Database Name:', 'Username:', and 'Password:'. Below these fields is a checkbox labeled 'Enabled'. At the bottom of the dialog are two buttons: 'Save' and 'Cancel'.

Field name	Description
Host name:	Enter the name of the SailPoint virtual machine.
Port:	Enter the port number assigned to the SailPoint virtual machine.
Database Name:	Name of the STI database created in SailPoint.
Username:	Enter a valid username that will be used to access the database.
Password:	Enter a valid password.
<input type="checkbox"/> Enabled	Enabling the SailPoint configuration will allow Osirium to connect with SailPoint.

3. Click  to save the new entry.
4. Click **Save**.
