PING & SAILPOINT

Comprehensive Access & Governance
for Hybrid Environments

SAILPOINT
SOLUTION BRIEF

SIMPLIFYING ACCESS IN COMPLEX ENVIRONMENTS

If your organization is like many, you're moving more and more applications to the cloud. But you still need to maintain critical applications on premises. This type of hybrid enterprise environment is becoming the rule, not the exception.

If this is your reality, you may feel challenged by the complexities of balancing security with user experience. On the one hand, you must mitigate the risk of security breaches and meet increasingly regulated data security, consent and privacy compliance requirements. At the same time, you need to grant users secure access and govern that access, ensuring only the right people have access to the right applications.

The integration between SailPoint and the Ping Identity Platform provides a simplified access and identity governance solution to address the world's most sophisticated environments. Together, Ping + SailPoint help you maintain a strong security posture, while ensuring your users, via their digital identities, gain secure and governed access to the applications they need, regardless of where they reside.
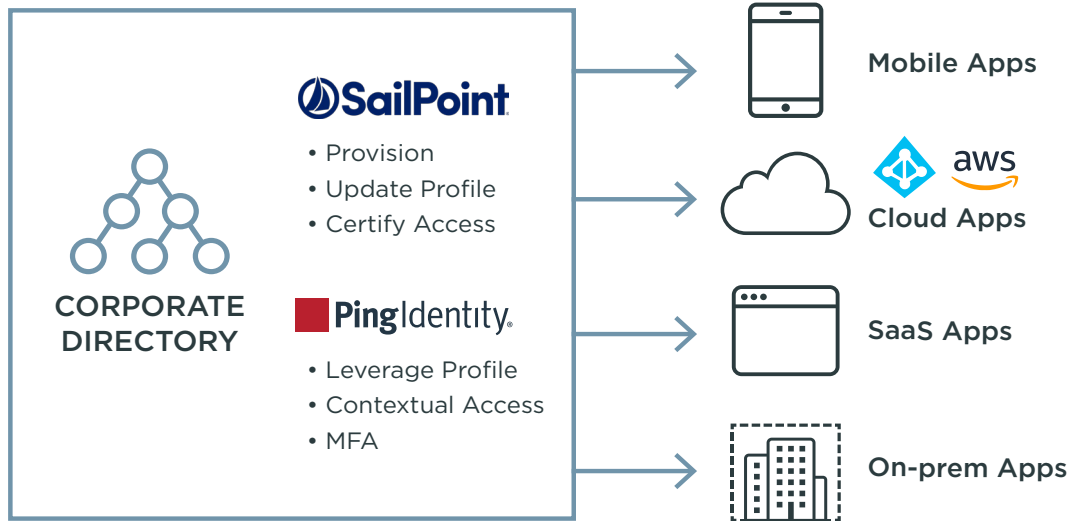

HOW PING AND SAILPOINT WORK TOGETHER

The integration of Ping + SailPoint enables you to provide access to applications in the public cloud, private cloud or on premises, secure in the knowledge that the correct users are getting access to the applications and data they require. You're able to achieve a balance of security and convenience for your users, while competently demonstrating compliance and maintaining an access audit trail for every identity.

- SailPoint builds the user profile and empowers users with policy-based, self-service access to all of the applications, data and systems they need to do their jobs.

- The Ping Identity Platform authenticates these users from anywhere on any device, with a flexible identity solution that detects who that user is and what the appropriate access should be.

Essentially, SailPoint creates a profile with all of the correct attributes and permissions. Then the Ping Identity Platform consumes that profile's attributes and permissions for a seamless user experience.

CORPORATE DIRECTORY

SailPoint
- Provision
- Update Profile
- Certify Access

PingIdentity
- Leverage Profile
- Contextual Access
- MFA

On-prem Apps

WHAT ARE THE BENEFITS?

Built on open standards, the combined Ping + SailPoint solution creates a flexible, secure and scalable identity ecosystem. You're able to fortify your security posture without costly and time-sensitive integrations, plus gain:

- Increased Visibility. You're able to view individual user access to ensure each login is securely authenticated and entitlements are appropriate for each user's current job/role.

- Greater Governance & Control: You gain greater control over access, plus increased efficiency through automation of processes like provisioning, password management, and access requests and certification.

- Seamless & Secure Access: Users are able to access applications with advanced authentication workflows that increase security using multi-factor authentication (MFA), reducing the work on IT to manage individual authentication per app.

The combination of SailPoint and Ping helps you fortify your security posture—without costly or time-sensitive integrations. You're able to strike a balance between security and convenience for your users, while demonstrating compliance with confidence and ease, maintaining an access audit trail for every identity.
PING IDENTITY

Ping Identity is on a mission to simplify how enterprises provide secure and seamless digital experiences. For the world's largest organizations, Ping helps prevent security breaches, increase employee and partner productivity, and provide personalized customer experiences. Enterprises, including more than half of the Fortune 100, choose Ping for identity expertise, open standards leadership, its partnerships with Microsoft, Amazon and Google, as well as its collaboration with customers like Boeing, Cisco, Disney, GE, Kraft Foods and Walgreens.

SAILPOINT

SailPoint is the leading provider of enterprise identity governance solutions. SailPoint empowers customers to efficiently and securely govern the digital identities of employees, contractors and business partners, and manage their constantly changing access rights to enterprise applications and data. Its open identity platform, delivered both on-premises and in the cloud, provides organizations with critical visibility into who currently has access to which resources, who should have access to those resources, and how that access is being used.
