

# Enhance Your Users' Experience with an SAP-integrated Interface

SAP is one of the most extensively used application suites in today's mid- and large-sized enterprises. SAP offers the most comprehensive solutions to all industry verticals and can reside on-premises, in the cloud or in hybrid environments.

SailPoint's identity governance solution integrates seamlessly into SAP through SailPoint's widely expansive connectivity capabilities. When applications are distributed in various environments and have in-depth customizations, managing access and identity also becomes complex. SailPoint's connectivity capabilities not only link you to these various systems, but also offers a complete governance experience for your entire ecosystem.

## SailPoint's SAP Governance Module

The SAP Governance Module is an extensive package of solutions offered by SailPoint and designed to handle the mission-critical needs of the most complex organizations. The vision behind the module is not to create a replica of SAP GRC, but instead to offer a rich and fine-grained tool that helps your business govern your SAP identity roles and access.

- **Integrated governance experience** – Covers the common governance operations with its seamless integration with the IdentityIQ® interface, including the identity warehouse, ability to view and edit identities, request access, and govern SAP GRC Firefighter access within IdentityIQ.
- **Visualizations of organization hierarchies** – Browse SAP Human Capital Management (HCM) reporting hierarchies of organizations and select identities with additional context provided, while also providing support for browsing and selecting SAP application resource landscapes used for access requests, certifications, and remediation.
- **Landscape filtering** – Makes it easier than ever to manage large SAP data sets across the enterprise with targeted filter support for easy-to-understand views of HR/Human Capital Management (HCM) hierarchies of organizations.
- **Improved "cross-platform" separation-of-duties support** – Provides granular separation-of-duties with preventive and detective capabilities across SAP and non-SAP platforms. This preventive and detective separation-of-duties within IdentityIQ can be based on SAP T-Codes. It can also be based on Authorization Objects and Field Values.

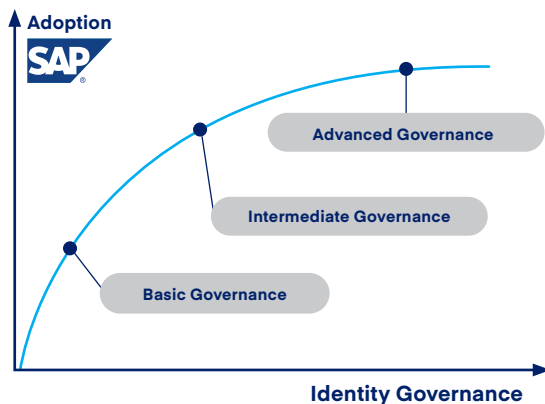

### Supported Modules/Platforms:

- SAP HR/Human Capital Management (HCM)
- SAP Business Suite
- SAP GRC Access Controls
- Alternate GRC Integrations
- SAP Success Factors
- S/4 HANA Database

### Need Help Getting Started?

SailPoint's team of Certified Implementation Engineers and Solution Architects can assist with the installation and implementation of the SAP Governance Module. Properly trained resources can configure basic governance within 4 weeks and expand to intermediate and advanced use cases rapidly to meet your business needs.

### Identity Governance for SAP

**Basic Governance** – Connectivity to SAP that provides identity life cycle management, compliance management, visibility, etc.

**Intermediate Governance** – Need for more granular access policies, scale with increased size and complexity, productivity improvements.

**Advanced Governance** – Direct integration with SAP's GRC offering or use of a third-party vendor.

**SAILPOINT:  
THE POWER  
OF IDENTITY™**
