

# Overview

This article is aimed to assist Administrators to create a role which can be granted to user(s) to gain the ability to run the Collector Installer Manager.exe

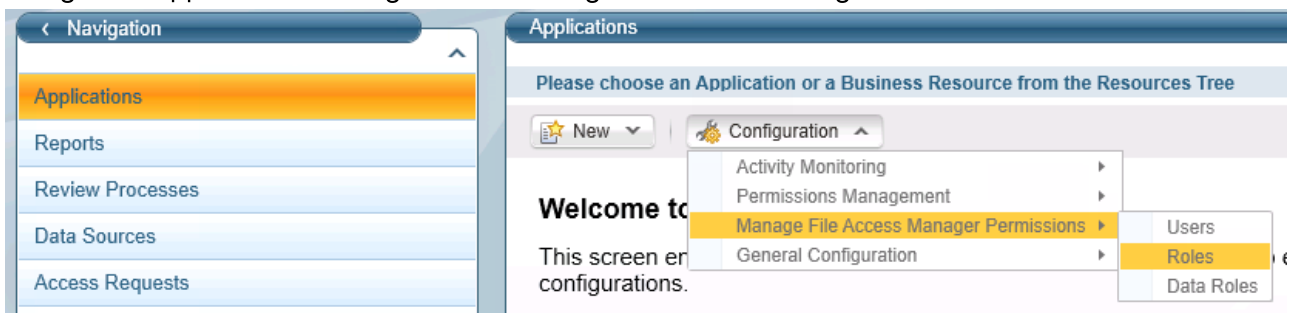

## Supported Versions

6.1-8.X

Note: 6.1 will be named **SecurityIQ** Collector Manager.

## Creating the Role

1. Log into the Admin Client with a user that has preexisting Administrator privileges.
2. Navigate to Application > Configuration > Manage File Access Manager Permissions > Roles

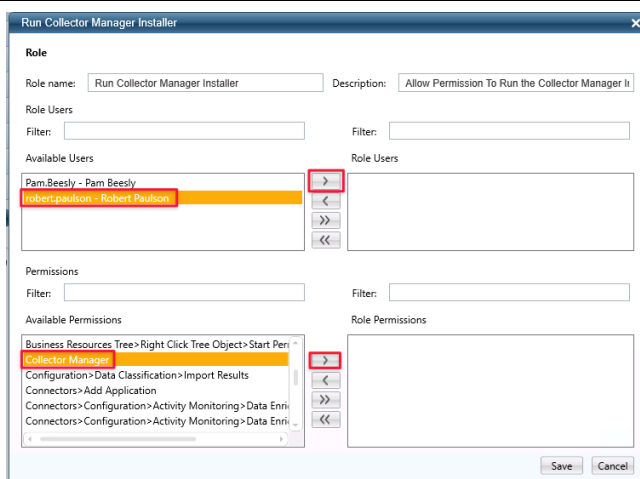

3. Click New
4. Enter your desired Role Name.

Recommend:

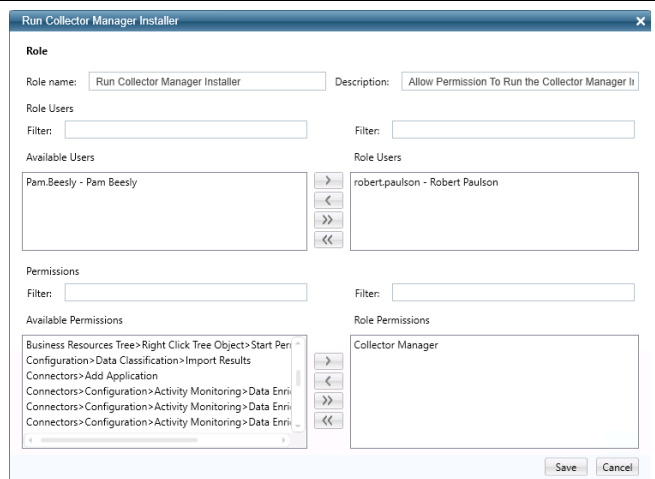

- Role Name : **Run Collector Installer Manager**
- Description: **Allow Permission to Run the Collector Installer Manager exe**

5. Select your desired user(s).
6. Select the **Collector Manager** role under the **Available Permissions** selection box.
7. Click the **single right facing arrow** to move the Collector Manager Role to the **Role Permissions** box.

### Before

### After

For more information on creating Roles via the Admin Client. Please refer to your versions respective Admin Guide: <https://community.sailpoint.com/t5/Documents/File-Access-Manager-formerly-SecurityIQ-Documentation/ta-p/171244>

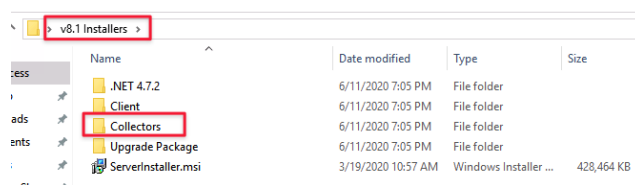

## How to run the Collector Installer Manager

When it comes time to install a new Activity Monitor, Permission or Data Classification "Collector" the Collector Installer Manager will be located in your respective version's Installer Folder that is downloaded from Compass.

Note: For this example we are using version 8.1.

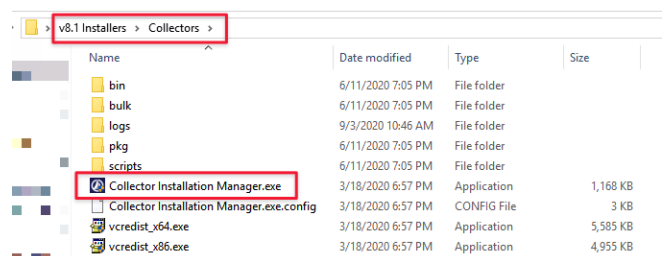

Additionally, please ensure you copy the entire **vX.X Installers** folder onto the desktop of the server you intend on installing the Collector(s).

### Installers Folder Contents

Name	Date modified	Type	Size
.NET 4.7.2	6/11/2020 7:05 PM	File folder	
Client	6/11/2020 7:05 PM	File folder	
<b>Collectors</b>	6/11/2020 7:05 PM	File folder	
Upgrade Package	6/11/2020 7:05 PM	File folder	
ServerInstaller.msi	3/19/2020 10:57 AM	Windows Installer ...	428,464 KB

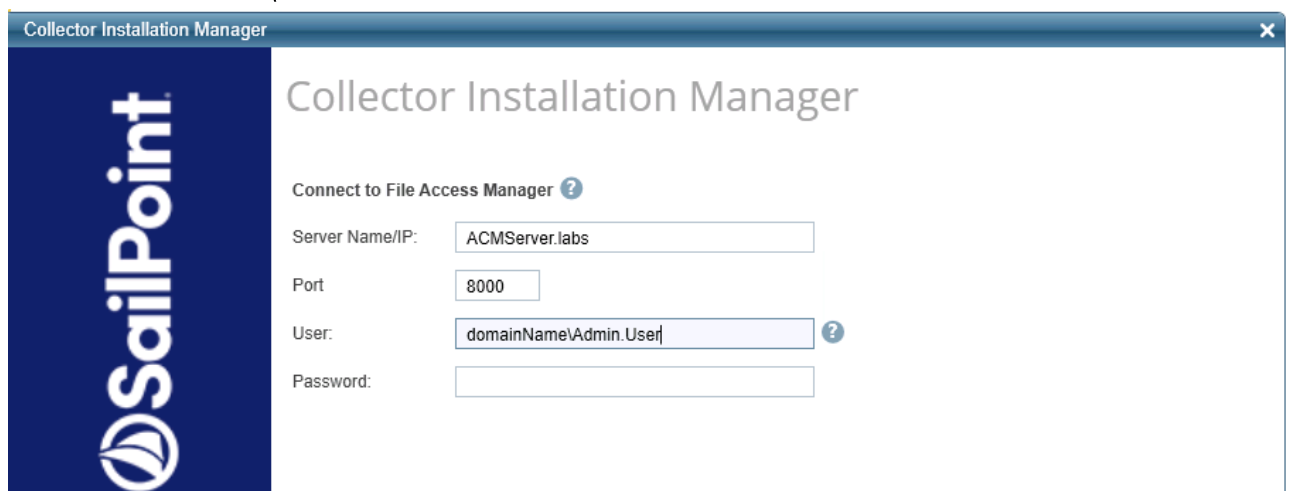

### Collectors Folder Contents

Name	Date modified	Type	Size
bin	6/11/2020 7:05 PM	File folder	
bulk	6/11/2020 7:05 PM	File folder	
logs	9/3/2020 10:46 AM	File folder	
pkg	6/11/2020 7:05 PM	File folder	
scripts	6/11/2020 7:05 PM	File folder	
<b>Collector Installation Manager.exe</b>	3/18/2020 6:57 PM	Application	1,168 KB
Collector Installation Manager.exe.config	3/18/2020 6:57 PM	CONFIG File	3 KB
vcredist_x64.exe	3/18/2020 6:57 PM	Application	5,585 KB
vcredist_x86.exe	3/18/2020 6:57 PM	Application	4,955 KB

Once you have the Installers folder on the intended server proceed with the following:

1. Run the Collector Installer Manager
2. Enter the Necessary Information:
  - **Server Name/IP** = The server name hosting the **Agent Configuration Manager Service**
  - **Port**: 8000 *Default Port unless changed during your initial installation*
  - **User**: domainName\UserName

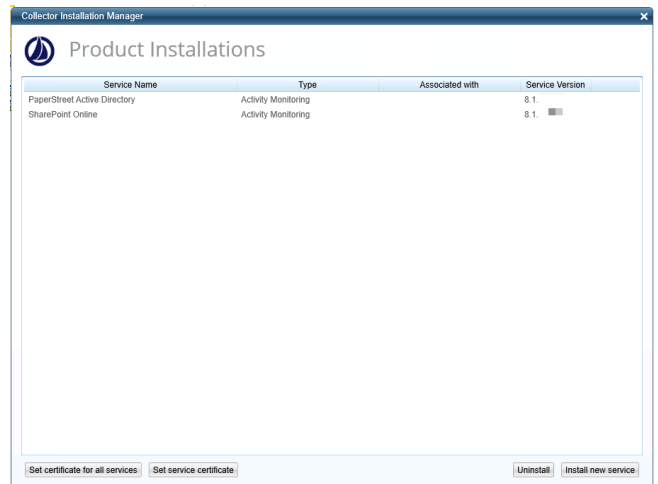

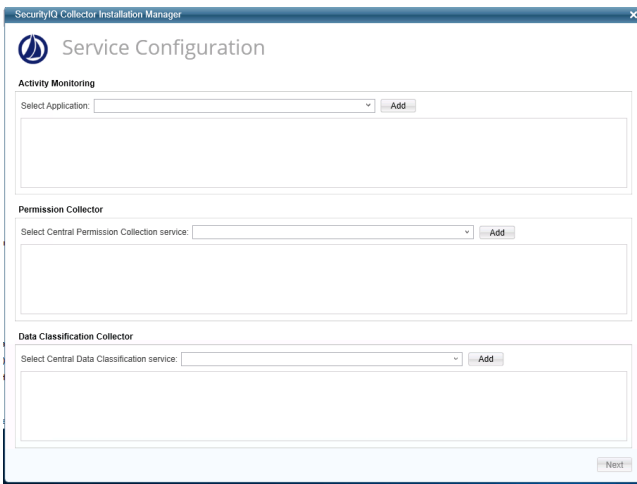

3. If there are currently any preexisting Activity Monitors, Permission or Data Classification Collectors, they will be presented to you. You will then have the option to uninstall or Install New Service.

Note: 6.1's UI will differ slightly than the 8.X versions.

6.1

8.X

Should you have any questions regarding Architecture or best practice on location where Collectors should be installed please reference the respective Administrator Guide or consider working with our SailPoint Professional Services Team or Trusted Partner.
