

SailPoint Professional Certification Paths

This document provides the *recommended* paths to professional certification for implementers of SailPoint’s IdentityNow and IdentityIQ platforms. For detailed course and exam descriptions, see the Identity University Full Catalog at <https://university.sailpoint.com>.

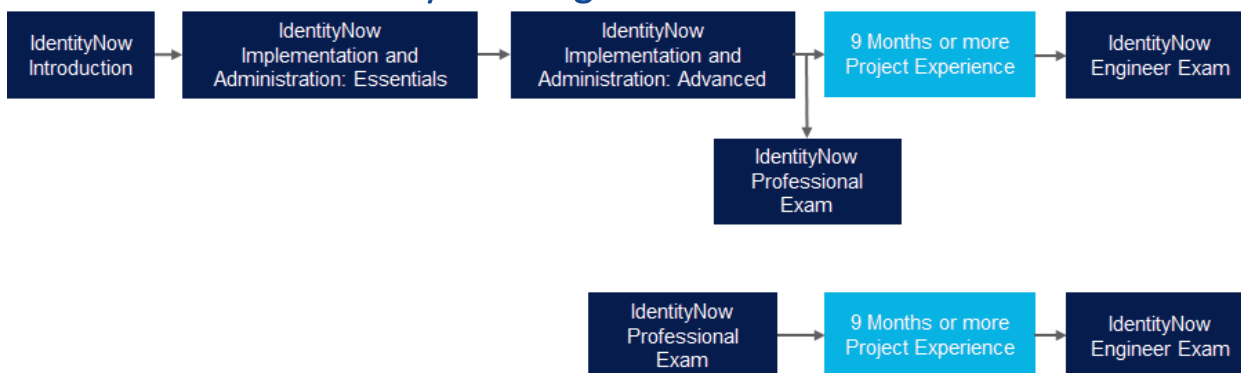

SailPoint Certified IdentityNow Professional

The SailPoint Certified IdentityNow Professional exam tests the skills and knowledge learned in the courses “IdentityNow Introduction”, “IdentityNow Implementation and Administration: Essentials”, and “IdentityNow Implementation and Administration: Advanced”. It is suitable for technical members of the IdentityNow onboarding and configuration team.

SailPoint Certified IdentityNow Engineer

IdentityNow Engineers are responsible for onboarding applications and configuring IdentityNow.

Candidates to be certified follow the recommended training path above for IdentityNow Implementers. However, the training alone is insufficient to pass the exam. Therefore, we strongly recommend students obtain at the very least nine

months of on the job implementation experience before planning to take the IdentityNow Engineer exam. There are no prerequisite certifications required, but some candidates may already hold the SailPoint Certified IdentityNow Professional certification.

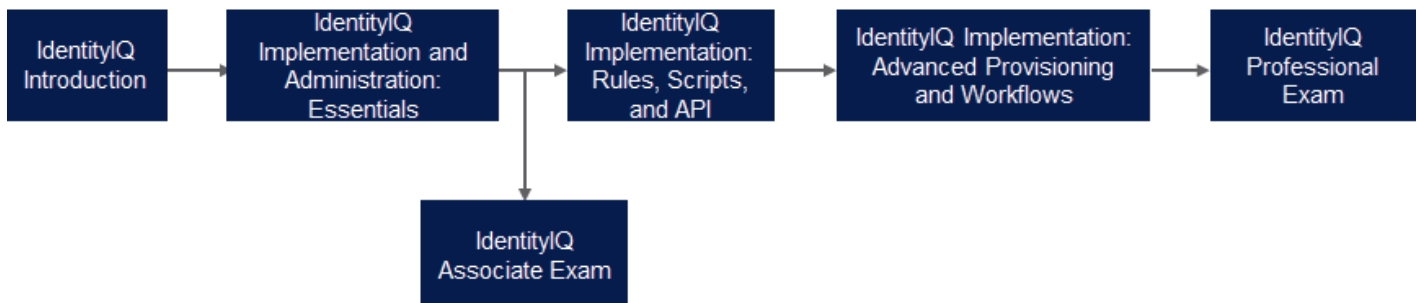

SailPoint Certified IdentityIQ Associate

The SailPoint Certified IdentityIQ Associate exam tests the skills and knowledge learned in the courses “IdentityIQ Introduction” and “IdentityIQ Implementation and Administration: Essentials”. It is suitable for SailPoint customers and partners who will be implementing IdentityIQ, and for system administrators of production IdentityIQ instances.

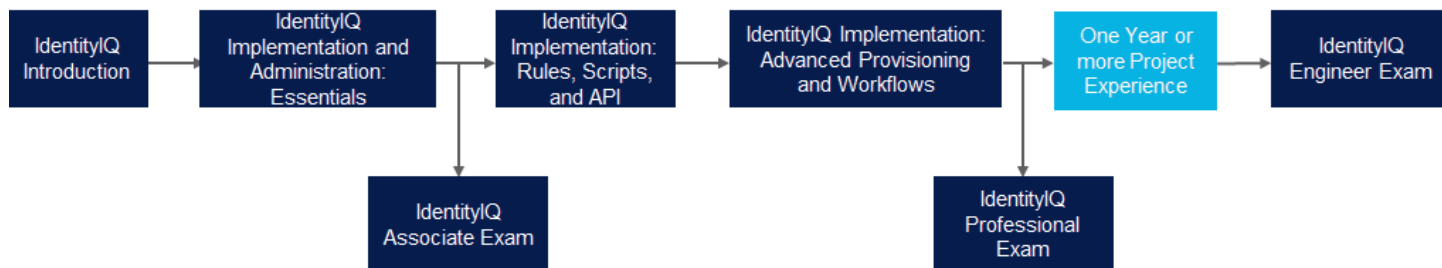

SailPoint Certified IdentityIQ Professional

The SailPoint Certified IdentityIQ Professional exam tests the skills and knowledge learned in the courses “IdentityIQ Introduction”, “IdentityIQ Implementation and Administration: Essentials”, "IdentityIQ Implementation: Advanced Provisioning and Workflows", and "IdentityIQ Implementation: Rules, Scripts, and API". It is suitable for members of the technical IdentityIQ implementation team. There are no prerequisite certifications required, but some candidates may already hold the SailPoint Certified IdentityIQ Associate certification.

SailPoint Certified IdentityIQ Engineer

IdentityIQ Engineers install, deploy and configure IdentityIQ in customer lower environments and local sandboxes.

Candidates to be certified follow the recommended training path for IdentityIQ Technical Implementers. They can choose to obtain SailPoint Certified IdentityIQ Associate and SailPoint Certified IdentityIQ Professional Certification as they complete recommended training, but they are not prerequisites for the IdentityIQ Engineer exam.

The training alone is insufficient to pass the exam. Therefore, we strongly recommend candidates obtain at the very least one year of on-the-job implementation experience before planning to take the IdentityIQ Engineer exam.

SailPoint Certified IdentityIQ Architect

IdentityIQ Architects design, implement, deploy, configure, extend, and support IdentityIQ in their customers' organizations.

Candidates to be certified must hold unexpired IdentityIQ Engineer certifications. We strongly recommend candidates obtain at the very least one year of additional on the job implementation experience beyond IdentityIQ Engineer before planning to take the IdentityIQ Architect exam.

Enhanced SailPoint Certifications

SailPoint Enhanced Certifications are available to holders of unexpired SailPoint Certified IdentityIQ Engineer, SailPoint Certified IdentityIQ Architect, or SailPoint Certified IdentityNow Engineer credentials. They must ALSO hold one of two curated 3rd party certifications in the areas of Cloud, Development, or Security, which are also unexpired.

For Cloud the required certifications are:

[AWS Certified Solutions Architect - Professional](#)

Or

[AWS Certified Solutions Architect - Associate](#)

Or

[Microsoft Certified: Azure Solutions Architect Expert](#)

Example: If you hold SailPoint Certified IdentityIQ Architect and [AWS Certified Solutions Architect - Professional](#) then

you can claim .

For Development the required certifications are:

[Oracle Certified Professional, Java SE 8 Programmer](#)

Or

[Oracle Certified Professional, Java EE 7 Application Developer](#)

Or

[Oracle Certified Professional, Java SE 11 Developer](#)

Example: If you hold SailPoint Certified IdentityIQ Engineer and [Oracle Certified Professional, Java EE 7 Application](#)

[Developer](#) then you can claim .

For Security the required certifications are:

[CISSP – The World's Premier Cybersecurity Certification](#)

Or

[ISACA's Certified Information Security Manager](#)

Example: If you hold SailPoint Certified IdentityNow Engineer and [ISACA's Certified Information Security Manager](#)

then you can claim .
